RE: Remondis Alternative Waste Treatment Facility, Camellia (10\_0028)

Dear Sir/Madam,

I am pleased to receive a letter regarding to the Exhibition of Environmental Assessment of Remondis Alternative Waste Treatment Facility, Camellia (10\_0028).

I fully appreciated this type of facilities (eg. Remondis Alternative Waste Treatment Facility) should be constructed in great Sydney region.

However, I was sure that an incorrect place was selected for Remondis Alternative Waste Treatment Facility if it was going to construct in this area.

Everybody knew that Parramatta region was a historical area, not only high density population was living in this area, but also it was a kind of commercial and political centre in this state.

Many government departments were already living here like state police head quater and state high courts, more state departments were also planned to move here. So many business head offices were historically located in this geographically centre area of great Sydney region.

From long term point of view, the waste treatment facilities might be not suitable to be constructed near any commercial, political and population centres (like Parramatta region) if we considered environmentally. A lot of correct places (like some low density population areas) could be selected to construct Remondis Alternative Waste Treatment Facility.

From economical point of view, it was not wise to waste any money constructing any waste treatment facility near the centre area short sightedly. Please don't waste our environmental and financial resource, build the State long term smartly.

I would like to express my object to the proposal of Remondis Alternative Waste Treatment Facility, Camellia (10\_0028).

I do not want my name to be made available to the Proponent, any other interested public authorities and on any Department's website.

Regards

CONFIDENTIAL
