Appendix H Vascular Plant Species on the Subject Site

22 March 2013

KEY	
W R	Conservation Status
	Species of National Conservation Significance (RoTAP – Briggs & Leigh 1996)
	Regional Conservation Significant Species (Mills 1993)
	Introduced Species
*	Exotic
N	Noxious weeds as listed on the New South Wales Noxious Weed Act 1993 for Shoalhaven LGA
	Location of records
A	Species recorded on the subject site during the 2003 investigations (Gunninah 2003)
B	Species recorded on the subject site during the 2001 investigations (Gunninah 2001)
C	Species recorded from Long Bow Point and vicinity (Gunninah 1999)
D	Additional few species detected during 2012 orchid surveys (SLR Ecology 2012)

Table B2 RoTAP Codes (Briggs & Leigh 1996)

CONSERVATION STATUS CODES FOR NATIVE FLORA (BRIGGS & LEIGH 1995).	
Distribution Category	
1	Known by only one collection only.
2	Species with a geographic range of less than 100 km.
3	Species with a geographic range of greater than 100 km.
Conservation Status	
X	Presumed extinct: not collected or otherwise verified over the past 50 years.
E	Endangered: taxon in serious risk of disappearing from the wild within 10-20 years if present land use and other threats continue to operate.
V	Vulnerable: not currently endangered; at risk of disappearing from the wild state within 20-50 years.
R	Rare: but not currently endangered or vulnerable.
K	Poorly Known: taxon that is suspected, but not definitely known, to belong to one of the above categories. At present, accurate field distribution information is inadequate.
C	Reserved: has at least one population within a National Park, Conservation Reserve, or area dedicated for the protection of flora.
Size-class of all Reserved Populations	
a	1000 plants or more are known to occur within a conservation reserve(s).
i	less than 1000 plants are known to occur within a conserved reserve(s).
-	reserved population size is not accurately known.
t	Total known population reserved.
+	Overseas occurrence (included if the taxon has a natural occurrence overseas).
