Content:

I would like to express my objection to this application for development for the following reasons:

> This development will affect the high water quality of Jervis Bay which is attributed to largely undeveloped catchments which spare the waters of the Bay from the sediments, nutrients and other pollutants normally exported from developed or developing catchments.

> "The wetlands of Currambene Creek are essential to the effective functioning of the broader Jervis Bay ecosystem.

> Any major changes, particularly large scale development has the potential to deleteriously affect wetland areas.

> People live in and visit Jervis Bay and the surrounding area, for its unique natural beauty not for its "facilities". We need to safe guard these assets for future generations.
