

Summary of Submission 4 – Neville Diamond

Raises concerns over breaches of OH&S laws, for example the complete closure of sheds will endanger health of workers, particularly for workers handling the 48 Mercaptans/small amounts of chemicals which can cause lung and asthma etc.

The assessment lacks information as to the success of the proposed biofilter. There is no example of any successful operation in the world.

Raises concerns over the removal of the existing chimney and bioscrubber as there would be no backup if the biofilter fails.

The modification won't work to reduce odour.
