RE TRINITY POINT MIXED DEVELOPMENT

We think the number of flights and the time available for helicopter use is quite excessive, and would be used for promotion of the lake to help sell the property. Before approval is given we feel emergency application in case of fire or accident should be included and a revision after a short period to see what impact the flights have on the environment.

It is noted that movements on the pontoon are limited, but nothing to stop Helicopters from staying in the air along the lake sightseeing while there is petrol in the tank.

Yours faithfully,

M J Morris *J M Morris*
