

We bought into a release where all the planning was set in concrete. We purchased off the plan from Frasers and we were not allowed to make changes so why should Frasers be allowed to make changes. Frasers have an extremely poor standard of construction as experienced by us and they should not be given an exemption. It is not inspiring.

I fear for the bird life of the area which is diverse as it will put pressure on their habitat with such an increase in population. The boat ramp will cause even more congestion as boat trailers take up street parking. The local hospital can not cope with the existing population and an increase the size Frasers want will only compound the overcrowding. This is extremely short notice for submissions which I can assume is the purpose.
