

vision

The UTS Kuring-gai campus site exists as testimony to the visionary work of Architect, David Don Turner and Landscape Architect, Bruce Mackenzie. Turner and Mackenzie's approach was to harmoniously blend the built structures and the natural environment. They purposely limited and minimised the building footprints to ensure that untouched existing bushland was clearly separated from the developed areas. This approach guaranteed that the intrinsic qualities of the site - the landform, indigenous plants and rock outcrops - were preserved and celebrated as integral components of the campus.

The vision of Turner and Mackenzie produced a unique Australian campus that was visually reminiscent of the hilltop town in a bushland setting, combining elements of both European 'Brutalist' architecture with the Sydney School of the late 1960s.

Redevelopment of the UTS site is to build upon the original design vision of Turner and Mackenzie. It is to be in keeping with the principle of a compact arrangement of buildings that maintains and respects the existing bushland.

It is essential that through careful and considered management of change, redevelopment of the site will embrace both the original designer's concept of the hilltop town, and the design of a safe, attractive and environmentally sustainable community.
