01 _____Background

1.1 Introduction

1

This report has been prepared to describe the landscape design proposal associated with the Part 3A Concept Plan application of Sydney Moorebank Intermodal Alliance (SIMTA) Moorebank Intermodal Facility (MITF).

1.2 The Vision

The development seeks to recognise the natural attributes of the locality and looks to integrate and imitate these qualities into a strong design theme that is reinforced in every aspect of the developments open space areas, by way of:

- _strong use of endemic species
- _consistent site wide tree canopy
- _native understorey plantings
- _low maintenance approach to the public domain
- _local material context to landscape surface treatment and finishes, and an
- _underlying natural landscape character throughout the development.

Reinforcement and extension of the surrounding natural context and ecological qualities will ensure the creation of a high quality landscape that will add environmental and aesthetic value and provide an inherent identity to the development.

The development endeavours to visually and physically connect with the existing landscape and natural vegetation of Cumberland Plain Woodland existing adjacent the site, through complimentary use of key tree species and understorey screen plantings.

The development will draw upon the sites local assets and will:

- _aim to create a distinctive and attractive natural environment;
- _introduce a strong native planting theme appropriate to the local setting and existing vegetation;
- _provide road verges for street tree plantings;
- _provide an informal streetscape character by randomly planted groups of selected native tree species;
- _consist of high quality robust landscape materials that compliment the setting;
- _utilise selected native plant material to accentuate and articulate selected spaces, entries and focal points;
- _provide a strong and consistent texture and colour of materials and planting;
- _preserve the natural and 'random' character of the existing landscape setting;
- _encourage opportunity for engagement by the site users with the natural environment; and
- _provide a aesthetically pleasing and safe environment for workers and visitors alike.
- _utilise the landscape screening for Moorebank Avenue.

2.2 Moorebank Avenue Frontage

3

Scale and visual screening are key design considerations to be addressed through the landscape concept for the Moorebank Avenue frontage.

Utilising the buffer zone between property boundary and the bio retention swale and the upper levels adjacent hardstand areas for dense tree canopy and lower screen planting immediate, strong vegetation impact is achieved.

Through careful species selection to the bio retention swale, to achieve stormwater objectives and complementary screen planting objectives, the road frontage landscape is further enhanced and the visual amenity greatly improved.

Key nodal points along Moorebank Avenue, specifically at vehicle entry zones, will include additional feature planting to highlight the arrival experience and embellish the native planting character established elsewhere along the road frontage.

2.3 Central Access Road

Consistent with the planting proposed to both the Moorebank Avenue frontage and the boundary and buffer zones, the proposed landscape design to the Central Access Road is to consist predominantly of endemic canopy trees of Eucalyptus species and uniform dense screen planting of native shrubs and ground covers to the lower levels.

Screening of buildings, shade provisions to pedestrians and visual diversity and interest will be paramount in species selection, placement and density.

2.4 Bio Retention Swale

Whilst achieving a primary function any requirement of water filtration and bio retention, the plantings proposed to the swales are to remain consistent with the overarching site wide objectives of uniform species use, endemic planting character, native landscape language and a variety of experiences and visual connections for the users of the development.

2.5 Boundary Treatment and Buffer Zones

5

The landscape planting proposed to the developments boundaries and buffer zones shall be consistent with the endemic Cumberland Plain Woodland species, evident locally, and in doing so provide a strong and unifying tree canopy structure that links the site holistically and provides the essential scale of planting necessary to compliment the developments built form.

The proposed planting will achieve a natural and informal appearance of the new landscape that matches and builds upon the existing environment of Cumberland Plain Woodland. Critically, the tree canopy will assist in mitigating the visual impact of planned built form by screening with dense vegetation, at both an upper and mid level.

2.6 Vehicular Carpark

Critical to the use and safety of the vehicular carpark areas associated with the development will be the need for the correct provision of shade trees and understorey plantings that ensure:

- _CEPTD requirements are met
- _Shade is provided for summer months
- _Visual diversity exists to aid character and interest
- _Low maintenance objectives are achieved, and
- _Limited damage and/or liability to pavements and vehicles alike.

2.7 Planting Principles

Each component of the landscape design has been carefully considered to help achieve the overall vision for the development. (as shown on planting structure diagram) The landscape planting will subtly vary to respond to each spatial zone across the site, while maintaining an overall consistent theme complimenting the endemic Cumberland Plain Woodland. Planting will strengthen and distinguish spaces and provide links between the proposed key vegetation zones, being:

- _Entry points and community amenity space
- _Boundary treatment and buffer zones
- _Vehicular carpark
- _Bioretention channels.

Furthermore, the landscape design proposes to build on key principles identified within the Liverpool DCP Part 1.1 and Part 2.4, by:

- _Retaining and enhancing the variety of natural characteristics where possible;
- _Protection and enhancement of the environmental integrity of the area;
- _Ensuring high standard of landscaped areas;
- _Ensuring clear sight lines and passive surveillance is maximised;
- _Ensuring that the development encourages people to use and interact in streets, car park areas and open spaces without fear or risk;
- _Protection of existing natural regeneration on adjoining sites;
- _Planting species that are consistent with the landscape themes proposed herein;
- _Planting species that are consistent with Liverpool DCP Part 1.2, Appendix 2, for preferred plant species;
- _Plant selection that is consistent with the woodland community present on the site; and
- _Ensuring appropriate application of site wide Water Sensitive Urban Design Principles.

02_____Landscape Proposal

8

2.8 Plant Species

The proposed planting mixes have been developed to build upon and enhance the following key vegetation communities found in the immediate vicinity of the development

_Shale Gravel Transition Forest

_Eucalyptus fibrosa

_Eucalyptus moluccana

_Eucalyptus tereticornis

_Melaleuca decora

_Cooks River/Castlereagh Iron bark Forest

_Brachychiton populneus

_Corymbia maculata

_Eucalyptus Crebra

_Eucalyptus fibrosa

_Eucalyptus longifolia

_Melaleuca decora

_Castlereagh Scribbly Gum Woodland

_Eucalyptus sclerophylla

_Castlereagh Swamp Woodland

_Eucalyptus parramattensis ssp parramattensis

_Melaleuca decora

and remain consistent with Preferred Species of Liverpool DCP Part 1.1, Appendix 2.

In addition, the following plants have been chosen for the bio retention channels as they are able to remove nutrients effectively whilst maintaining a high filtration capacity:

_Small tree:

_Melaleuca ericifolia

_Grasses and Sedges:

_Carex appressa

_Ficinia nodosa

_Goodenia ovate

_Juncus amabilis

_Juncus flavidus.
